You brought it up, so you must suspect something." Curtis shudders. His fevered imagination supplies numerous chilling possibilities for what was dislodged. Anita held on to Colman's finger, and he read her action as a silent invitation. He had slept with her a few times, many months ago now, and enjoyed it. However much he had found himself becoming aroused by her attention through the evening, the conversation about pairings and the imminence of planetfall introduced a risk of misinterpretation that hadn't applied before. Being able to look forward to making a stable and permanent domestic start on Chiron could well be what lurked at the back of Anita's mind. When he got the chance, he decided, he would have to whisper the word to Hanlon to help him out if the need arose as the evening wore on.. pickled slugs, and crushed-insect protein. "You could talk to him. I know he listens to what you say. We've talked about things." Sterm allowed a few seconds for her admission to settle. "Because they would become jailers of the prison that Howard is turning that world into. You are here because you know that I would take the world which he thought would give itself to him, because I represent the strength that he does not, and with me you could survive." Celia looked up again, but Sterm's eyes had taken on a faraway light. "Chiron has made fools of the weak, who deluded themselves that it would play by their civilized rules, and now that the weak have fallen, the way is left clear for those who understand that nothing imposes Earth's rules here. It is the strong who will survive, and survival knows nothing of scruples." braced leg had ever before allowed, playing cowgirl-with-lariat as she rose from the floor. Swung like a. "Maybe not so hard if you're honest with yourself." Noah had been so taken with her body and her. "It's a thought," Wellesley agreed distantly. He cast his eyes round the table. "Does anybody have a better idea?" Nobody did. "So let's get Merrick here and talk to him," Wellesley said. He sat back and placed his hands on the edge of the table. "This would be a good time to break for lunch. Scribe, adjourn the session here. We will reconvene in ninety minutes. Contact Leighton Merrick in Engineering, and have him join us then. Also ask him to bring with him two of his more capable officers. Advise me at once if there are any difficulties. That's all.".. caught her attention. At first he hears only the grumble of the SUVs. . . . Then, in the distance, a flutter of.. Pernak rose from the desk at which he had been working, and moved over to the window to gaze down at the lawns between the two arms that formed the front wings of the building. A lot of staff and students were beginning to appear, some lounging and relaxing in the sun and others playing games in groups here and there as the midday break approached. He was used to living among people who expressed feelings of insignificance and fear of a universe which they perceived as cold and empty, dominated by forces of disintegration, decay, and ultimately death-a universe in which the fragile oddity called life could cling precariously and only for a fleeting moment to a freak existence that had no rightful place within the scheme of things. Science had probed to the beginnings of all there was to know, and such was the bleak answer that had been found written.. The pitiable tremor in his voice should be an embarrassment to any self-respecting boy of adventure.. through the serried arches of her steepled fingers.. river runs wild, and suddenly we're caught up in a flood. "Did anybody see the news today? Some scientist or other thinks the Chironians could be building bombs. There was an interview with Kalens Wo. He said we couldn't simply take it for granted that they're completely rational down there." "I still don't understand the politics behind it all though," he said to the two Chironians who were accompanying him and Jay toward the cafeteria in the Administration Building in front of the main reactor site, where they were due to have lunch. One of them was a young Polynesian named Nanook, who worked with control instrumentation; the other was a slightly younger, pale-faced blonde called Juanita, who dealt with statistics and forecasts and seemed to be more involved with the economic side of the business. Kath herself had taken her leave earlier, explaining that she was expecting another party of visitors. Bernard spread his hands in an

imploring gesture. "I mean... who owns the place? Who decides the policies for running it?" "No thanks. I want to see her go. I'll put her on the roses. She'll like them." "I know, but I figured rd go take a 160k at the place anyhow out of curiosity. That can't do any harm. Later on, well... maybe anything could happen." After stripping down to panties and a tank top, she sat in bed, atop the sheets, sipping cold lemon vodka. "Mrs. D," Leilani said to Geneva, "that creepy rosebush of yours just made obscene gestures at me." lighters, and more exotic items that the boy can't identify, but it knows whether or not you've fed coins to. "I didn't say that. But they're funny people . . . cagey. They're not exactly giving straight answers about everything." approached Micky. "Do you believe in life after death?" each step before taking it, like a patient learning to walk again after spinal injury, she was able to proceed. Sirocco shrugged noncommittally. "Can't say. I wouldn't worry too much about it. If you stick close to Steve and Bret and do what they tell you, you'll come through okay." Although they couldn't claim to be campaign veterans, Colman and Hanlon were among the few of the Mission's regulars who had seen combat, having served together as rookie privates with an American expeditionary unit that had fought alongside the South Africans in the Transvaal in 2059, the year before they had volunteered for the Mayflower II. The experience gave them a certain mystique--especially among the younger troops who had matured--in some cases been born and enlisted--in the course of the voyage.. remote control. Jay and Marie were her latest weapons. Bernard knew she was rationalizing her own fears of the changes involved, but he wasn't going to make a public issue of it. "I'd like them to have the chance to Make the best lives for themselves that they can, sure. They've got that chance right here. We don't have to go halfway round the planet to recreate part of a world we don't belong to anymore. It couldn't last. That's all over now. You have to bring yourself to face up to it, hon." "There won't be a war on Chiron, will there?" Marie asked.. barbecue anytime soon?" the idea of getting up from the driver's seat. She shrinks away from them, and terror twists her face into. Leilani's palms were still damp. She blotted them again. In spite of the August heat, her hands were cold. Celia's eyes opened wide. "You're kidding!" Hanlon detached himself from a group and sauntered over to Colman, Celia, and Lechat. Things had been so hectic that an opportunity for a few quick words with them had not presented itself since Colman's return. "Well, I see there's no need to ask how things went on your side, Steve. I take it that Veronica's in safe hands now." "guy who robbed your store?" Bernard gave Jay a stern look. "You don't expect us to believe that, surely. Now, tell us where this stuff came from. I want the truth. If you've been up to something, I'll be willing to write it off as nothing more than planet fall getting to your head. Now--are you sure there isn't something you want to tell us?" "You want me to prevail upon Howard to prevent his destroying himself." Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of. his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man-had no place and no longer belonged.. * * *. Then is there any difference?" "Kids running around wild, breeding like rabbits--It's disgusting. And making bombs Savages is what they are--no better than the Chinese. Kalens has got the right idea. He'll teach 'era some decency and respect." Colman drank up and left..something more desperate than hope, by a faith that sometimes seemed foolish to him but that he never."How long ago?".Colman's eyebrows arched in surprise. "True, but-wow! I had no idea that anything here was that advanced." Experiments and research into harnessing the potential energy release of antimatter had been progressing on Earth since the first quarter of the century, primarily in connection with weapons programs. The attraction was the theoretical energy yield of bringing matter and antimatter together- one hundred percent conversion of mass into energy, which dwarfed even thermonuclear fusion. For bombs and as a source of radiation beams, the process had devastating possibilities, and it had been appreciated for a long time that such a beam would offer a highly effective means of propelling a spacecraft.."You can't be soft with people like this," Borftein said bluntly. "Give them a yard, and they'll hate you because they want a mile. Give them nothing and clamp down hard, and later on they'll love you for giving them an inch. I've seen it all before."..Trusting the wisdom of his brother-becoming, the boy drops to his knees, braces one hand against the.freedom..They were watching and waiting while the same thing happened with the Mayflower II Mission, he realized. When and how would they move? And, he wondered, when they did, which side would he be on?.Two, three, five men burst past the front of the parallel SUVs, a formidable pack of husky specimens, all."Stay," whispers the motherless boy.."Still, man, that was impressively more colorful than anything I was expecting. We got more than we.as much underwear in this bureau as anything else.."I guess I'll have to think about it," Jay conceded. Hanlon ordered three hamburger dinners, and the two sergeants spent a half hour talking with Jay about Army life, football, and how Stanislaw could crash the protected sector of the public databank. Finally Jay said he had to be getting home, and they walked with him up several levels to the Manhattan Central capsule point..Tweaked by puzzlement, her classic features had a pixie charm. "Excuse me?". "That would be a wrong assumption."."You mean the way's clear right down to the Battle Module?" Colman asked.."I was almost twelve when it ended."..for drugs and baubles. Maybe she had in fact bought a hat, for in her more seductive moods, she liked..What distinguished the generations was that every member of each had a corresponding partner in all the others which was identical in every property except mass; the muon, for example, was an electron, only two hundred times heavier. In fact the members of every generation were, it had been realized, just the same first-generation, "ground-state" entities raised to successively higher states of excitation. In principle there was no limit to the number of higher generations that could be produced by supplying enough excitation energy, and experiments had tended to confirm this prediction. Nevertheless, all the exotic variations created could be accounted for by the same eight ground-state quarks and leptons, plus their respective antiparticles, together with the field quanta through which they interacted. So, after a lot of work that had occupied scientists the world over for almost a century, a great simplification had been achieved. But were quarks and leptons the end of the story?.In the dark, as the big Windchaser begins to move, Curtis sits on the bed and feels along the base of it..die."..reborn, the frightened fugitive scampered directly to him, onto his palm, up his arm, finally to a stop on his.shame arose from the fact that she had spilled her guts this evening. Regular but fast. Metabolism racing to rid the body of drugs..Three obstacles now remained between Kalens and the vision that he had nurtured through the. years of presiding over the kind of neofeudal order that would epitomize his ideal social model. First there was the need to ensure his election to succeed Wellesley; but Lewis was coordinating an effective media campaign, the polls were showing an excellent image, and Kalens was reasonably confident on that score. Second was the question of the Chironians. Although he would have preferred Borftein's direct, no nonsense approach, Kalens was forced to concede that after six years of Wellesley's moderation, public opinion aboard the Mayflower II would demand the adoption of a more diplomatic tack at the outset. If diplomacy succeeded and the Chironians integrated themselves smoothly, then all would be well. If not, then the Mission's military capabilities would provide the deciding issue, either through threat or an escalated series of demonstrations; opinions could be shaped to provide the justification as necessary. Kalens didn't believe a Chironian defense capability existed to any degree worth talking about, but the suggestion had potential propaganda value. So although the precise means 'remained unclear, he was confident that he could handle the Chironians. Third was the question of the Eastern Asiatic Federation mission due to arrive in two years' time. . With the first two issues resolved, the material and industrial resources of a whole planet at his disposal, and a projected adult population of fifty thousand to provide recruits, he had no doubt that the Asiatics could be dealt with, and likewise the Europeans following a year later. And then he would be free to sever Chiron's ties to Earth completely. He hadn't confided that, part of the dream to anyone, not even Celia..peculiar quality of confrontation had crept into their exchange.."Yes, I can, and no, there aren't. They didn't come across like kids at all, but more like small people who were busy finding out how things were done. In a room two posts back, he had glimpsed a couple of kids who couldn't have been more than twelve probing carefully and with deep frowns of concentration inside the electronics of a piece of equipment that must have cost millions. The older Chironian with them just watched over their shoulders and
