"I'm pretty sure it can't be Wellesley. He's tried to play it straight, it's all sweeping him way out of his depth. Anyhow, what would he have to gain? All he wants to do is to be put out to pasture; he's only got a few days left. Ramisson obviously wouldn't be involved in something like that, and the same goes for Lechat. But as for the rest, if you ask me, they're all crazy. It could be any of them or all of them. But that's who the Chironians are really after.".Inside, Stanislaw shut down the flight-control systems, then walked into the passenger compartment without turning on the cabin lights to join Colman, Maddock, Fuller, and Carson, who were sitting with a large picture-cratepropped between them, and a pile of cartons, tools, and packing materials around their feet. Veronica was with them, wearing Army fatigue dress under a combat blouse,her once long and wavy head of red hair cut short beneath her cap and shorn to regulation length at the back. Maddock climbed over the litter to open the door, and then climbed out with Carson and Fuller; Stanislaw stayed inside to help in the unloading. Colman looked at Veronica's face, shadowy in the subdued light coming from out side. "Feel okay?" he asked..Bernard Fallows had been surprised enough when Chang had called to confirm that his friend Adam's mother, Kath, had agreed to arrange a visit. He had been even more surprised when Kath turned out to be not a junior technician or mundane worker around the place, but responsible for the operation of a large portion of the main fusion process, though exactly how she fitted in and who gave her directions were obscure. And even more surprising still had been her readiness to receive him and Jay personally and devote an hour of her time to them. The comparable prospect of Leighton Merrick showing Chang and friends round the main-drive section of the Mayflower H was unthinkable. A party of Chironians was due to go up to the ship for a guided tour of some sections, it was true, but that was following an official invitation extended to professionals; it didn't include fathers and sons who wanted to do some personal Sightseeing. Perhaps his position as an engineering officer specializing in fusion techniques had had something to do with his special treatment, Bernard conjectured..seemed to have been dammed into a still pool. Geneva slid the dish of garnishes across the table..The bewildering proliferation first of baryons and mesons, and later the quarks, which were supposed to simplify them, that had plagued studies of the structure of matter to the end of the twentieth century had been reduced to an orderly hierarchy of "generations" of particles. Each generation contained just eight particles: six quarks and two leptons. The first generation comprised the "up" and "down" quarks, each appearing in the three colorcharge variants peculiar to the strong nuclear force to give six in all; the electron; and the electron-type neutrino. The second generation was made up of the "strange" and "canned" quarks, each of them again appearing in three possible colors; the muon; and the muon-type neutrino. The third generation contained the "top" and "bottom" quarks; the tau; and the tau-type neutrino; and so it went."No doubt," Noah said, "they were once troubled youths rescued from a life of mischief, and.not merely a passing madness or an enduring insanity, but also passion. Stormbel drew his automatic and leveled it at Ramisson's back. "You have one warning," he called out. Ramisson kept walking. Stormbel fired. Ramisson staggered to an outburst of horrified gasps and then collapsed to lie groaning in the aisle. Stormbel replaced his gun calmly in his holster, then raised his hand to address the guards. "Remove that man, and see to it that he receives medical attention." Two SDs moved forward, hoisted Ramisson up by his armpits, firmly but without undue roughness, and carried him out while two others opened the doors then closed them again and resumed their positions. Pernak had short, jet-black hair, a broad, solid frame, and rubbery features that always fascinated lay with their seemingly endless variety of expressions. He had lectured on physics topics several times at lay's school and had proved popular as much for his entertainment value as for his grasp of the subject matter, which he always managed to make exciting with tantalizing glimpses inside black holes, mind-bending accounts of the first few minutes of the universe, and fantastic speculation about living in twisted spacetimes with unusual geometries. On one occasion he had introduced Feynman diagrams, which represented particles as "world lines" traversing a two-dimensional domain, one axis representing space and the other time. Mathematically and theoretically a particle going forward in time was indistinguishable from its antiparticle going backward in time, and Pernak had offered the staggering conjecture that there might be just one electron in the entire universe--repeating itself over and over by going forward as an electron and backward as a positron. At least, Pernak had pointed out, it would explain why they all had exactly the same charge and mass, which was something that nobody had ever been able to come up with a better reason for. "Present . . . arms!" Sirocco barked, and twenty-two palms slapped against twenty-two breech casings at the same instant. "I never travel." "Oh, so it's trouble them fellas is looking for, is it?" a voice with just a hint :of an Irish brogue asked softly from the doorway. Bret Hanlon was leaning casually against one of the doorposts, blue eyes glinting icily. His huge shoulders seeming almost to reach the other side of the door. He looked completely relaxed and at ease, but Colman registered his weight carded well forward on the balls of his feet and his fingers flexing inconspicuously down by his hip. The two corporals glanced at each other apprehensively. Hanlon's appearance altered the odds a bit. Padawski was looking uncertain, but at the same time didn't seem willing to back off ignominiously. For a few seconds that dragged like minutes, the charge in the room crackled at flashpoint. Nobody moved. Clump, clump, clump, clump. His train of thought was derailed by the sound of steady tramping approaching from his left--not the direction in which the detail had departed, which shouldn't have been returning by this route anyway, but the opposite one. Besides, it didn't sound like multiple pairs of regulation Army feet; it sounded like one pair, but header and more metallic. And along with it came the sound of two children's voices, whispering and furtive, and punctuated with giggles. exceptional strength matched the congressman's weakness. She didn't have to be coddled. Movies and books warn that closets. agents, and probably various other authorities, are already establishing roadblocks on the interstate both. Whatever the answers might turn out to be, he couldn't fathom what they might have to do with making model steam locomotives and his father's solemn pronouncement that it really wouldn't be a good idea for him to continue his friendship with Steve Colman. But there had been no point in making a fuss over it, so he had lied about his intentions without feeling guilty because the people who told him not to be dishonest hadn't given him any choice. Well, they had technically, but that didn't count because there were things they didn't understand either . . . or had forgotten, maybe. But Steve would understand. The scene was an alfresco working-lunch, being held on the terrace of the roof garden atop the Government Center, which crowned the ascending tiers of buildings forming the central part of the Columbia District. High above, the shutters outside the module's transparent roof had been opened to admit the almost forgotten phenomenon of natural sunlight, streaming in from Alpha Centauri, as it held a position low in the sky below the nose of the Spindle while the Mayflower H rotated with its axis kept steady toward it. "I don't have any idea what you're talking around," Micky lied. "That's for you to tell me . . . when you're. "Section leaders forward." He moved out into the aisle, where the floor had folded itself into a steep staircase to facilitate fore-and-aft movement, and climbed through into the side-exiting lock chamber with Colman and Hanlon behind him while Red and Blue sections formed up in the aisles immediately to the rear. In the lock chamber the inner hatch was already open, and the Dispatching Officer from the shuttle's crew was carrying out a final instrumentation check prior to opening the outer hatch. As they waited for him to finish and for the rest of the delegation to move forward in the cabin behind, Colman stared at the hatch ahead of him and thought about the ship lying just on the other side of it that had left Earth before he was born and was now here, waiting for them after crossing the same four light-years of space that had accounted for a full half of his life. After the years of speculations, all the questions about the Chironians were now within minutes of being answered. The descent from the Mayflower II had raised Colman's curiosity to a high pitch because of what he had seen on the screen. For despite all the jokes and the popular wisdom, one thing he was certain of was that the engineering and structural modifications that he had observed on the outside of the Kuan-yin had not been made by irresponsible, overgrown adolescents.."Hardly any leaves."."I don't get your attitude."..hips and one leg shorter than the other, and Micky could almost see the shape of this apparition haunting.Gen ... or was she Kim Novak?"..though ablaze and frantic to douse the flames. He's.Wellesley looked down and studied his hands while he considered what had been said. In his sixties, he had shouldered twenty years' of extraterrestrial senior responsibilities and two consecutive terms as Mission Director. Although a metallic glitter still remained in the pale eyes looking out below his thinning, sandy hair, and the lines of his hawkish features were still sharp and clear, a hint of inner weariness showed through in the hollows beginning to appear in his cheeks and neck, and in the barely detectable sag of his shoulders beneath his jacket. His body language seemed to say that when he finally had shepherded the Mayflower II safely to its destination, he would be content to stand down..along the hallway to another door that stands ajar.."Down!" Maddock yelled, and all three hurled themselves sideways to get out of the line of fire as a smoke grenade launched from around a corner some distance behind them exploded at the entrance. Fire from the entranceway raked the area as the D Company squad broke cover and rushed forward through the smoke, hut the first of them was still twenty feet away when the steel door slammed

down and alarms began sounding throughout the Government Center. Stanislau entered more commands. A different table of information appeared on the screen. "SD guard details and timetable for posts inside the Columbia District tonight," Stanislau said. They would refrain from doing anything to that one until the last moment. "Half an hour." She smiled a promise and winked. Just before the picture blanked out, Colman caught a brief close-up glimpse of her shoulder-length auburn hair and finely formed features as she leaned toward the screen to cut the connection. Colman hesitated for a split second to let the question ask itself. "So...?" outbuildings. With haste, he passes among them. "Perhaps we could propose a goodwill exchange visit," Stern suggested. "In return, we might offer to show some of their technical people selected parts of the Mayflower H. A legitimate cover would be desirable." Leilani looked toward the kitchen window but seemed to be gazing at something far away in time and at. The chest of drawers stood against the wall, on four stubby legs. More than live feet high. Four feet. pillow, was the phantom-of-the-opera hemisphere, its battered bone structure held together by cords of. "No, sir. Why would I?" Colman's eyes widened for a moment as he listened. "I'd never really thought about it," he admitted. "But I guess, yes . . . it'd have to have been like that. Your kids today don't seem to have changed all that much either. "How do you mean?"
