It was all very confusing..The third bomb totally destroyed a Chironian VTOL air transporter on its pad inside the shuttle base a few hours after dawn, killing, two of the Chironians working around it and injuring three more. Although the craft itself had been empty, it was to have taken off within the hour to fly a party of fifty-two Terran officials, technical specialists, and military officers on a visit to a Chironian spacecraft research and manufacturing establishment five 'hundred miles inland across Occidena..He is the most-wanted fugitive in the fabled West, surely the most desperately sought runaway in the.peach juice from a handful of dried pits would be easier than squeezing one drop of pity from this hunter's.Colman frowned and shook his head with a sigh as he thought about it. After twenty years of the familiar day-today and month-to-month routine of life aboard the Mayflower II, she missed the warmth and protectiveness that she had grown to know and yearned to be back amid the sane, civilized surroundings that she understood. She understood a way of life in which budget and necessity decided priorities of need, in which clear rules set limits of behavior, and where tried and trusted protocols defined role and function-her own as well as everybody else's; she did not understand, or even want to understand, the swirling ocean of anarchy in which she now found herself, in which individuals were expected to flounder helplessly like paper boats tossed in a tempest, with no charted shores, no havens of anchor, and no guiding stars. She had no place in it, and she desired no place in it. Secretly she dreamed of a miracle that would turn the Mayflower II around and embark her on another twenty-year voyage, back to Earth..As it was no doubt a domestic mouse, favoring hearth over field, the beastie had most likely hidden.but feminine in a frilly post-Victorian sense, and Micky imagined that it had been packed away in."But what about the border guards?' Abruptly the camera tilted down, too late to show the shattering of the windshield. Documented. Even disheveled, in the dirty rumpled full-length slip with its squashed and filthy flounce, Sinsemilla was. "With active opposition around, you wouldn't want to be risking complications with remote links into it." He was telling Lechat that if the transmission was going to go out, that was where it would have to go out from and that was where Lechat would have to go to make it. But more to the point, as Lechat well knew, Bernard was saying that Celia would have to go there too; what she had to say couldn't come second-hand through anybody else. "Why would anybody be interested?" "She's a good-looking girl. What does she do?" Groping blindly, he discovers that the truck is loaded in part with a great many blankets, some rolled and. "Guard detail, file left and right by sections," Sirocco said at the front. "Section leaders forward." He moved out into the aisle, where the floor had folded itself into a steep staircase to facilitate fore-and-aft movement, and climbed through into the side-exiting lock chamber with Colman and Hanlon behind him while Red and Blue sections formed up in the aisles immediately to the rear. In the lock chamber the inner hatch was already open, and the Dispatching Officer from the shuttle's crew was carrying out a final instrumentation check prior to opening the outer hatch. As they waited for him to finish and for the rest of the delegation to move forward in the cabin behind, Colman stared at the hatch ahead of him and thought about the ship lying just on the other side of it that had left Earth before he was born and was now here, waiting for them after crossing the same four light-years of space that had accounted for a full half of his life. After the years of speculations, all the questions about the Chironians were now within minutes of being answered. The descent from the Mayflower II had raised Colman's curiosity to a high pitch because of what he had seen on the screen. For despite all the jokes and the popular wisdom, one thing he was certain of was that the engineering and structural modifications that he had observed on the outside of the Kuan-yin had not been made by irresponsible, overgrown adolescents. He turned back to find her holding a phial of capsules. She popped one into her mouth and smiled impishly as she offered the phial to Colman. "It's Saturday, why not live it up a little?" He scowled and shook his head. Anita pouted. "They're good. Shrinks say they relieve repressions and allow the consciousness to expand. We should get to know ourselves." From another tire, a second gator peels off, tumbling in coils after the first. maniac. CHAPTER TWENTY-EIGHT. Or, at least, the three that lived with him. Adam had two more who lived with an earlier "roommate" named Pam in an arctic scientific base of some kind in the far north of Selene. Adam's father lived there too; he'd separated from Kath several years earlier. Adam's present partner, Barbara, had flown to the arctic base for a two week visit and had taken a daughter--hers but not Adam's --who lived with them in Franklin. Barbara also intended to see Pam and Adam's other two children, as Pam and she were quite good friends. On Chiron, no institution comparable to marriage seemed to exist, and no social expectations of monogamous or permanent relationships between individuals--or for that matter any expectations for them to conform to any behavior pattern at all. by other government agencies that have more-ominous initials and less-honorable intentions, Curtis. "A communications specialist at Brigade." protection against a head shot. Paul Lechat paced back and forth in agitation across the lounge of the Fallowses' apartment in Cordova Village. "I didn't think the Chironians would go that far." he said. "I thought they would react only against direct violence. Why couldn't they have just let everything die a natural death?" "Sure," Chang said confidently. "I'll give you a call when I've talked to Adam. He's the friend. Would Jay like to go too?" in a dead-end gang. But I got turned around. Her palms were damp. She blotted them on her T-shirt. come looking. Bernard snapped his fingers. "Of course, Colman! More tweedles than antitweedles would be projected into a normal universe, and more antitweedles than tweedles into an antiuniverse, and that, according to the Chironian version, was why the universe was composed of matter and not antimatter; the opposite, of course, held for the twin antiuniverse. The way to obtain antimatter, they therefore reasoned, would be to make a small part of the universe look like an antiuniverse so that tweedlespace could be "fooled" into projecting antitweedles instead of tweedles into it. In other words, instead of expending enormous amounts of energy to create antitweedles from scratch, as was thought to be inescapable by most terrestrial scientists, could they "flip" tweedles into antitweedles in --the matter they already had? "Wha-huh? ... Who? Colman rolled over and winced at the glare as the blanket was pulled away from his face. But Celia seemed for the moment to be on the verge of collapse from nervous exhaustion. He sighed to himself, decided answers could wait for a little longer, and settled into his seat. Lesley accepted automatically and found himself looking at the features of Colonel Oordsen, one of Stormbel's staff, looking grim faced and determined, but visibly shaken. "Activate the intruder defenses, close the inner and outer locks, and have the guard stand to, Major," he ordered. "Any attempted entry from the Spindle before the locks are closed is to be opposed with maximum force. "You should think about things as well as just ask questions. Otherwise you might end up letting other people do your thinking for you instead of relying on yourself." "Smart . . . brains." A faraway look was coming into Anita's eyes. "Brains and trains. I like it. It's lyrical. Don't you think it's lyrical?" She smiled at Jay and winked saucily. "Hi, Jay." He's only got to hop across a couple of miles. It wouldn't need a surface shuttle." "Exactly, Jay. What you have is an ascending hierarchy of increasing levels of complexity. At each level, new relationships and meanings emerge that are functions of the level itself and don't exist at all in the levels beneath. For instance, there are twenty-six letters in the alphabet. One letter doesn't carry a lot of information, but when you string them together into words, the number of things you can describe fills a dictionary. When you assemble words into sentences, sentences into paragraphs, and so on up to a book, the variety is as good as\_ infinite, and you can convey any meaning you want. Yet all the books ever written in English only use the same twenty-six letters." "What can I do ya for, big guy?" a counter waitress inquires..In the gloom, the boy loses track of the money. He began eating again, then stopped and looked up. "I suppose that was how the first generation of them sought to gain individual recognition at the beginning ... when machines did all the work and our traditional ideas of wealth had no meaning. And it's become embedded in their basic thinking." He nodded slowly to himself and reflected further. "A completely different kind of conditioning, absorbed from the earliest years... based on recognizing individual attributes. Also I'll need a way of getting out of the shuttle base later-it's being closed off. You're the only person she'll trust. Can you get away inside the next hour, say?" "What do you mean?" But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men.
