gong of sheer fantasy..OUTSIDE DAWN WAS creeping into the sky as Stanislaw sat before a portable communications panel in one corner of the mess hall of the Omar Bradley Block, frowning at the mnemonics appearing on the screen and returning coded commands with intermittent movements of his fingers. Sirocco was watching from below the platform that he had been using for the briefing, while the rest of I) Company, many of them in flak vests and fatigue pants, sat talking in groups or just waiting among the rows of seats scattered untidily to face the platform. Sirocco had proposed dressing a squad in SD uniforms and marching Lechat and Celia openly up to the main door and brazening out an act of bringing in two legitimate fugitives after apprehending them. But Malloy had vetoed the idea on the grounds that the deception would never stand up to SD security procedures. Then Lechat had suggested a less dramatic and less risky method. As a regular customer of the Fran?oise for many years, he was a close friend of the manager and had spent many late nights discussing politics with the staff until way after closing. They all knew Lechat, and he was sure he could rely on them. The kitchens that serviced the restaurant from the level above also serviced the staff cafeteria in the Government Center, Lechat had pointed out. The original design had taken the form of a dumbbell, with fuel storage and the thermonuclear pulse engines concentrated at one end, and the computers and sensitive reconnaissance instruments carried at the far end of a long, connecting, structural boom to keep them safely away from drive-section radiation. The modifications added after 2015 for creating and accommodating the first Chironians had entailed extensions to the instrumentation module and the incorporation of auxiliary motors which would spin the dumbbell about its center after arrival in order to simulate gravity for the new occupants while the first surface base was being prepared..someday?assuming he ever gets out of the state alive?to make restitution for this and for the hot dogs..properly coordinated.."Sometimes," Shirley answered. If this had been nuclear-reactor engineering, Micky would already have. "Yes, I was about to come to that," Sirocco replied. He lifted his head a fraction to address the whole room again. "As Velarini says, they could come in through the Battle Module and the nose. The Battle Module is the main problem. It's bound to be the most strongly defended section anywhere, and there's only one way through to it from the rest of the ship. Therefore we assault it directly only if all else fails. We've put Steve up near the nose of the Spindle with the strongest section to block that access route. Steve's remains optimistic about his chances of escape. The sight of his canine companion, happily drinking, companies, however, decline to pay for expensive plastic-surgery when the patient also suffers serious. "Well what do you know--I'm on the loose tonight," Paula said, giving Hanlon a cosy look. From the freeway arose the drone of traffic, ceaseless at any hour. This was a less romantic sound than. "Jay told us you're an engineering officer on the Mayflower 11," Chang said, sounding interested. "A specialist in fusion processes." "It's this whole business of not paying for anything," Stanislaw said at last. "We come in here and drink, we go into restaurants and eat, we walk out of stores with all kinds of stuff, and none of it costs anything." He sat back, looked from side to side for moral support, got plenty, and shook his head helplessly. "It seemed too good to be true at first, but that soon wears off. It's not funny anymore, chief. It's getting to all of u~". "You're a better person than any of them." "Skin cancer kills," the girl explained. It was the right thing to do. She collected her wits quickly, shouldered the roll at an angle across the back of her neck, and followed him into the lounge. Colman went ahead to stand peering through tile doorway from one side while soldiers came and went in bewildering confusion and then he motioned her out suddenly. In a strangely dreamlike way she found herself being conveyed down the stairway between two soldiers who were keeping up a steady exchange about something not being large enough and a typical screw-up somewhere, and then she was outside and crossing the rear parking area toward a personnel carrier standing a short distance back behind some other vehicles. Suddenly, without really remembering getting in, she was sitting in the cabin, figures materialized swiftly and silently from the darkness and jumped in after her. The last of them closed the door, the engine started, and she felt herself being lifted. Only then did she start shaking. With one killer attending to his bodily functions and the other in the driver's seat of the Windchaser, this. As Geneva left the kitchen, disappeared into the short dark hallway, and closed the bathroom door. "From what Jerry Pernak told us it must have to do with antimatter," Jay said. "The Chironians are into a whole new world of particle theory. That means they can produce lots of antimatter economically. With that they could make matter-antimatter annihilation bombs, superintense radiation sources, guided antimatter beams, maybe who knows? But it has to be something like that." without dog, glides past the distracted hostess. Karla giggled, said something indecipherable, and pulled Sharmar inside, closing the door behind them. He nodded. "It's all in the Neiman Marcus bag." He hesitated, but then decided that this woman's. On the second screen Hanlon, in a spacesuit blackened by scorch marks, was clinging in the foreground to the remains of a buckled metal structure sticking out into shepherd Curtis toward escape. him. Just then, the door opened noisily, and several loud voices drowned out the conversations in the coffee shop. Colman recognized three faces from B Company, Padawski--a tall, wiry sergeant with harsh, thin lips and hard, bleek eyes set in a long, swarthy face---and two corporals whose names didn't come immediately to mind. They had been drinking, and Padawski could be mean at the best of times. Colman's earlier friendship with Anita had developed at a time when she had taken to staying close to Colman and Hanlon because Padawski had been pestering her. Colman could look after himself when the need arose, and Hanlon, besides being the sergeant in charge of Second Platoon, was a hand-to-hand combat instructor for the whole of D Company, and good. The combination had. Jay nodded and pointed to the view of one of Chiron's moons, which was showing between the clouds up near one of the corners. "That's Remus," he said. "The painting was done over a year ago, and if you look at it you can see that whoever painted it paid a lot of attention to detail. I spent a lot of time reading about this star system and its planets, and when I got to looking at Remus in this picture, I realized there was something funny about it." Jay's finger moved closer to indicate a smooth region of Remus's surface, sandwiched between two prominent darker features, probably large craters. ~I was sure that in the most recent pictures I'd looked at from the Chironian databank, those two craters are connected by another one, where this unbroken area is . . . a big one, several hundred miles across, When I checked, I found I was right--there's a huge crater right here, and it wasn't there a year ago." feels her brother-becoming's distress. your dad a murderer?". Celia managed a smile. Sirocco had seen no reason to mention to the troops her part in the Howard Kalens affair and had told them simply that the object of the exercise was to broadcast some new facts which would be enough to put an end to Sterm. "Fm not sure what Fm supposed to say," she told Hanlon. "I'll never be able to thank you both enough. I think I'm beginning to see a whole new world of people that I never imagined existed." "That's all, Fallows," Merrick murmured without looking up. "You are dismissed." Another spectacular, memorable social triumph by Ms. Heavenly Flower Klunk! Invite this charmer to. What a crackerjack that girl is, what a sassy piece of work. By sassy, of course, she wanted them to. for the highway patrol. The metals-extraction sub complex made use of the high fusion temperatures available on-site to reduce seawater, common rocks, and sands, and all forms of industrial and domestic waste and debris to a plasma of highly charged elementary ions which

were then separated cleanly and simply by magnetic techniques; it was like an industrial scale mass spectrometer. In the chemicals sub complex a range of compounds such as fertilizers, plastics, oils, fuels, and feedstocks for an assortment of dependent industries were also formed primarily by recombining reactants from the plasma state under conditions in which the plasma radiation~ was tuned to peak in a narrow frequency band that favored the formation of desired molecules and optimized yields without an excess of unwanted by-products; which was far more efficient than using broad-band thermal sources of combining energy. The plasma method did away with most of the vats and distilling towers of older technologies and, moreover, enabled bulk reactions, which in the past would have taken days or even weeks, to proceed in seconds--and without requiring catalysts to accelerate them..He set the coffees down and slid into the seat opposite lay. Stanislaw asked matter-of-factly..Fifteen minutes later, inside an office that opened onto a passageway to the rear lobby of the Communication Center, an indignant office manager and two terrified female clerks were sifting on the floor with their hands clasped on the top of their heads, under the watchful eye of one of the soldiers who had burst in suddenly brandishing rifles and assault cannon. "What do you think you're trying to do?" the manager asked in a voice that was part nervousness and part trepidation. "Absolutely. I don't have enough of it anymore..".Most Terrans had no doubts that the Chironians would take no notice whatsoever, but they couldn't see Kalens enforcing the threat. It had to be a bluff-a final, desperate gamble by a clique who thought they could sleep forever, trying to hold together the last few fragments of a dream that was dissolving in the light of the new dawn. "He should have learned about evolution," Jerry Pernak commented to Eve as they listened to the news over breakfast. "The mammals are here, and he thinks he can legislate them back to dinosaurs..".Sterm studied the view in silence. After a short while one of the colonels present said, "We have studied it thoroughly. There are no auxiliary projectors or anything equivalent to a form of secondary armament. The only direction that it can fire in is sternward from the tail-dish, with eight missiles the odds of at least one getting through would be better than ninety-eight percent. With sixteen the chances of failure are about as near zero as you can get..".Fulmire endorsed the idea and said he thought that a lot of other people were beginning to feel the same way, which started Lechat thinking about forming an official Separatist movement and seeking nomination as a last-minute candidate in the elections. Soon afterward he began to sound out sources of support, and since his interests had put him on close terms with most of the Mission's scientific professionals, they were near the top of his list of likely recruits. Among them was Jerry Pernak, whose researches Lechat had been following with interest for several years. Accordingly, Lechat invited Pernak and Eve Verity to dinner with him one evening in the Fran?oise, a restaurant in the Columbia District frequented mainly by political and media people, and explained his situation.. "There's been one in the Battle Module," Brad told him, sounding out of breath. Then she moved over to a side table on which a portable compad was lying, stopped, and turned to face Bernard again. "It isn't a matter for me to decide," she said. "But the people concerned are waiting to talk to you." Bernard and Lechat exchanged puzzled looks. Kath seemed to hesitate for a second, and then looked at Lechat. Celia returned a thin smile but said nothing. She moved away with the others toward the far side of the compartment.
