"I would have let her win," said Leilani, "out of courtesy and respect for her advanced age, but before I she stubbornly clings. Inside, the furniture seemed to be on the brink of spontaneous combustion. The sliding windows were." "I know exactly what you mean," Carson said. Driscoll nodded his mute assent also..To the astonishment of even themselves, they found that they could. The Chironian approach was to harness high energy inertial fusion drivers to produce plasma concentrations high enough to "boil" into pure photon fluid which recreated inside a tiny volume the conditions of the early Big Bang. Within this region, space and time recoupled and contracted inward with the imploding core to simulate for an instant the bizarre, inverted conditions of an antiuniverse, and in that instant a large portion of the tweedles liberated in the process transformed into antitweedles which, under the prevailing high-energy conditions, combined preferentially into antiquarks and antileptons rather than radiation. Some loss was caused by annihilations with the matter particles also formed to a lesser degree, as had also occurred doubtlessly in the Bang itself, but the net result was an impressive gain relative to the energy invested in driving the process, and the Chironians had already demonstrated the validity of their model successfully in a research establishment at the far end of Oriena..of The X-Files, kid.". The sight of Cliff Walters moving toward the monitor room on the other side of the glass partition interrupted his thoughts. A moment later the door to one side opened with a low whine and Waiters walked in. Fallows swung his chair round to face him and looked up in surprise. "Hi. You're early. "I've seen what they're doing in some of the labs, and believe me, Bern, it's enough to blow your mind," Pernak said. "Those guys are not stupid, and they're certainly not the kind who will just lie there and let anyone who wants to, walk all over them. They've got the know-how to match anything the Mayflower II can hit 'em with, and maybe a lot more. They've known for well over twenty years what to expect. Well figure the rest out yourself." "That's right-Michigan. I think I was something of a not-very-welcome accident. My mother liked the fun life-lots of boyfriends, and staying out all night and stuff. I guess I was in the way a lot of the time."..Bernard was nodding but with evident reservations. "True," he agreed. "But it's up in the ship, not down here. And it must be strongly protected. It's a vicious circle- you'd have to get in there to turn the Army around, but they're going to be outside and stopping your getting in until you've done it. 110w can you break out of it?"..Adam had not seemed especially surprised when Hanlon expressed reservations about the wisdom of such an attitude, and had replied to the effect that on Chiron personal affairs were considered personal business. Some couples might choose to remain exclusively committed to each other and their family, others might not, and it wasn't a matter for society or anybody else to comment on. As far as he was concerned, Adam had ~aid, the notion of anybody's presuming to decree moral standards for others and endeavoring to impose them by legislation was "obscene." "Worth considering for what? You're not saying he'd make an engineering officer, surely."..swivels on his stool, putting his back to Curtis, and struggles to master his emotions. Although to all..step too far. "We might have been born light-years apart," he told Colman. "But the stuff we're made of came from the same place."..Nearing the end of the kitchen, he encounters several workers

crowding through an open door..the reason for the fracas..The process had been the same all through history, and it was happening again. The latest four-year-old news from Earth described the rapid escalation of the latest war against the New Israel of the South. Only this time the EAF was getting involved. The Western strategists had interpreted it as an EAF policy to provoke an all-out war all across Africa so they could move in afterward and dose up on Europe from the south. Apparently the idea was to try and take over the whole landmass of Asia, Africa, and Europe. Why did they want to take over the whole of Asia, Africa, and Europe? Colman didn't know. He was pretty sure that most of the people killing each other back there didn't want the territory and didn't care all that much who had it. The Howard Kalenses were the ones who wanted it, just as they wanted everything else. Perhaps if they'd learn how to get along with people without being scared to turn their backs all the time and how to make love with their own wives in bed, they wouldn't need geographical conquests. And 'yet they could tell everybody it made them better than the people were, and the people believed it..ate tofu and canned peaches on a bed of bean sprouts?'.for want of a better word... for a lot of things, anyhow." They're in the Columbia District-not far from the Communications Center. If there was some way of getting Borftein out and taking him in on our plan, it would stand a much better chance of having the effect you want on the Army." Then as an afterthought she added, "And if Wellesley could be included as well as Borftein, it might help to make up for some of the things we can't prove." She shifted her gaze around the room and eventually allowed it to settle on Colman. "But I don't know if something like that would be possible."..player was olive-skinned with Mediterranean features. "Oh... she's very good," Bernard said..Jay sat at an empty booth while Colman collected two coffees from the counter, then inserted' his Army pay-card into a slot. In a lot of ways Jay reminded Colman of himself when he was a lot younger. Colman had acquired his name from a professional couple who adopted him when he was eleven to provide company for their own son, Don, who was two years older. They hadn't wanted to disrupt their careers by having another child of their own. Colman's stepfather was a thermodynamics engineer involved with heat exchangers in magnetohydrodynamics systems, which accounted for Colman's early interest in technology. Although the Colmans had done their best to treat both boys equally, Steve resented Don's basic schooling and was jealous when Don went to college to study engineering, even though he himself had then been too young W do the 'same. The rebelliousness that" had contributed W Steve's being placed in the home for wayward adolescents from which he had been adopted reappeared, resulting in his giving the couple some hard times, which upon reflection he felt bad about. For some reason that Steve didn't understand, he felt that if he could help Jay realize his potential and use the opportunities he had, it would make up for all that. Why, he didn't know, because nothing he did now could make any difference to the Colmans, who were probably old and gray somewhere, but he felt he owed it to them. People's minds worked like that. Minds could be very strange.."No ..," Colman shook his head distantly. "It's too much to go into right now. Look-"..my business, and you'd hustle me back to my own yard."..Before Bernard could reply. Jay came back in carrying the landscape painting he had brought back from Franklin after his first expedition out exploring. He propped it on one end of the table and held it up so that everyone could see it. "Do you notice anything unusual about that?" he asked them..Noah stopped, dismayed. "Which one?"..time, she's satisfied with takin' on a joint, keeping a nice light buzz, maybe floating on a Quaalude. She."Kind of." That seemed to tell them something until the painter added, "Doesn't everybody kind of know everybody?".Colman looked away in exasperation. She could have been a unique, thinking person. Instead she chose to be a doll, shaped and molded by everything she saw and heard around her. It was all around him--half the people he could see were in the chorus line behind Stormbel's puppet show. They could be told what to think because they didn't want to think. Suddenly he remembered all the reasons why he had cooled things with Anita months ago, when he -had been toying seriously with the idea of making their relationship contractual and settling down as Hanlon had. He had tried to tune into her wavelength and found nothing but static. But what had infuriated him more was that her attitude had been necessary--she had a head but wouldn't use it..Apparently neither as a reply nor as an expression of physical pain, the dancing woman let out a pathetic..As far as Borftein could see, with himself and the Army behind him, Kalens had all the authority he needed-provided, of course, that he won the upcoming election. But after talking to Stern about it, Kalens had accepted that an attempt to impose authority over Chiron overtly would risk alienating the Mission's population. A more subtle approach was called for. "Ultimately, human instincts cling to the known and the familiar," Kalens lectured Borftein later. "A visible commitment to lawfulness as a alternative to the lawlessness of this planet is the way to maintain cohesiveness. We can't afford to jeopardize that." So Borftein had -agreed to try playing the game their way, which hinged upon provisions written into the laws to take account of the abnormal circumstances of a twenty-year voyage through space..Bernard's eyes widened incredulously. "But if the Kuan-yin isn't finished, then what made the crater in Remus?".Bernard's concern changed to a deep, uneasy, suspicion as he listened. Waiters and Hoskins were his equals in rank and duties; this could only mean that he had been left out of something deliberately. "The rest comes later."..know why you can't, too, and that's all right."..Most Terrans had no doubts that the Chironians would take no notice whatsoever, but they couldn't see Kalens enforcing the threat. It had to

be a bluff—a final, desperate gamble by a clique who thought they could sleep forever, trying to hold together the last few fragments of a dream that was dissolving in the light of the new dawn. "When did you see a shoddy piece of workmanship on Chiron a door that didn't fit, or a motor that wouldn't start?" Eve asked him. "Have you ever come across anything like that anywhere there? It makes what we're used to look like junk. I was at a trade show yesterday that some of our companies put on in Franklin to do some market research. The Chironians thought it was a joke. Have you figured out how many sweet young dollies there must be running around down there?" Sirocco chuckled lasciviously over the intercom. "I bet Swyley has a miraculous recovery between now and when we go into orbit." Color-blind or not, Corporal Swyley had seen the present situation coming in time to report sick with stomach cramps just twenty-four hours before D Company was assigned two weeks of Bomb Factory guard 'duty. He was "sick" because he had reported them during his own time; reporting stomach cramps during the Army's time was diagnosed as malingering. .beyond the horizon. Colman stared at Celia for a few seconds longer. He still didn't know why Celia should have been so anxious to get away from Stern or why she should have been in any danger. Life couldn't have been much fun with somebody like Howard, he could see, so the thought of her gravitating toward a strong, protective figure like Stern wasn't so strange. And it didn't seem so unnatural that she should have stayed near Stern after Howard was killed. In such circumstances it would have been normal to provide her with an escort down to the surface too, for her own security; but having her watched all the time and not allowing. The planet had evolved a variety of life-forms, some of which approximated in appearance and behavior examples of terrestrial flora and fauna, and some of which did not. Although several species were groping in the general direction of the path taken by the hominids of Earth two million years previously, a truly intelligent, linguistic, tool-using culture had not yet emerged. "Gut-feel," Pernak told him "The weapons have to exist. I tell you, I know how these people's minds work." "I'm not that hung up about it," Colman insisted, not for the first time. In the forty-nine years since, Franklin had grown to become a sizable town, in and around which the greater part of the Chironian population was still concentrated. Other settlements had also appeared, most of them along the Medichironian or not far away from it. "Thanks. They must be real. Even the best implants don't look that natural. Unless there's major." "Hey, don't
