

THE PRINCESS ESCAPE

"So what is it they've got?" Colman asked again. "Missiles wouldn't be any use to them, and they know it. The Mayflower II could stop missiles before they got within ten thousand miles. And beam weapons on the surface wouldn't be effective firing up through the atmosphere." He spread his hands imploringly. "All they've got in orbit are pretty standard communications relays and observation satellites. The moons are both out of range of beam projectors. So what else is there?".short-sleeved top. On the back of the shirt, a cool yellow-and-red logo said ROSWELL, NEW."Dry as a cracker.".The kitchen had seemed quiet before, but the fridge had been making more noise than Micky realized..Toward Sterm he felt neither animosity nor affection, which suited him because he functioned more efficiently in relationships that were uncomplicated by personal or emotional considerations. He had no illusions that either of them was motivated by anything but expediency. Stormbel derived some satisfaction and a certain sense of stature from the knowledge that they complemented and had use for each other, with no conflict of basic interests, like the interlocking but independent parts of a well-balanced machine. Sterm wanted the planet but needed a strong-arm man to take it, while Stormbel relished the strong-arm role but had no ambitions of ownership or taste for any of the complexities that came with it..Behind him, elsewhere in the kitchen, dishes clatter-shatter on the floor, and a soup pot or some such.Kath's voice remained low but took on a note of urgency. The new round of weeping was subdued,."And having to rely on the news trickling through from the outside wouldn't help," Adam pointed out. "There have been so many rumors already. It would be more likely to just fizzle out,." "You've got it." Kath smiled..A good point, lay admitted to himself. "Security_" he tried. "To get rich... Whatever." "Hey, kid, how do you like---".Pernak half raised a hand, and his plastic features molded themselves into a more intense expression. "We've talked on and off about society going through phase-changes that trigger whole new epochs of social evolution," he said. "Well, that's exactly what's happened down there. You can't extrapolate any of our rules into this culture. They don't apply. They don't work on Chiron." "Go, thingy, go, go!".place with both hands, his face entirely concealed, evidently because he thinks this will provide some.Bantam Books are published by Bantam Books, a division of Random House, Inc. Its trademark,."I think I'd have done the same thing," Otto told him..EVEN IN HIS short time at the university near Franklin, Jerry Pernak had learned that Chironian theoretical and experimental physics had departed significantly from the mainstream being pursued on Earth. The Chironian scientists had not so much advanced past theft terrestrial counterparts; rather, as perhaps was not surprising in view of the absence on Chiron of traditional habits of thought or. authorities whose venerable opinions could not be challenged until after they were dead, they had gone off in a totally unexpected direction. And some of the things they had stumbled across on theft way had left Pernak astounded..Bernard was watching with interest over Stanislaw's shoulder. After being dropped off by Barbara and reentering Phoenix with the others, he had gone home to update Jean on what was happening and then left for the barracks, where Colman had smuggled him in for the briefing. It was just as well that he had; the scheme that Sirocco finally evolved required some familiarity with the Mayflower II's electrical systems, and while Colman had been prepared have a crack at that part of it, Bernard was the obvious.pie..Jay stood up and left the room quietly. Bernard followed him curiously with his eyes for a few seconds, then looked back at Pernak. "But it's a hell of a thin case for shipping everyone off to Iberia, isn't it? And besides, if you're right, then I'd have thought the best place to stay would be right here-all mixed up together with the Chironians. That way nobody's likely to start throwing any big bombs around, right?" He turned his head to grin briefly at Jean. "I think Jerry made my point."..Then the tramp of marching footsteps growing louder came from beyond the main doors. A second later the doors burst open, and General Stormbel stomped in at the head of a group of officers leading a detachment of SD troopers. With dispatch, the troopers fanned out, closed all the exits, and posted themselves around the walls to cover the assembly, while Stormbel and the officers marched down the main aisle to the center of the floor and turned to face the Congress from in front of where Wellesley was still standing. Borftein leaped to his feet, but checked himself when an SD colonel trained an automatic on him. He sank into his seat, a dazed expression on his face..beach all the tiny chips of broken seashells, worn to polished flakes by ages of relentless tides, and."The build-up at Canaveral is proceeding on schedule and will be completed before midnight," he informed Sterm at a midday staff meeting in the Columbia District's Government Center. "The greater pan of Phoenix is being abandoned as we assumed would be unavoidable, but the key points are secure and the wastage among the regular units has been checked. Transfer of SD forces to the surface will be completed by early evening, with the exception of those units being held to cover the Battle Module, the Columbia District, and Vandenberg. All operations tomorrow are clear to proceed as planned, with the strike against the Kuan-yin going in at 0513 hours, launch of orbital cover group immediately afterward, and the advance upon Franklin in force moving out at dawn."..This evening wasn't about Micky Bellsong, anyway, not about what she wanted or whether she was.Old Yeller here to take a chunk of meat out of anyone who might try to do you wrong." "By your customs," the Chironian observed..appeared to be malformed.."I've talked to shrinks. They're all crazy. How do they know whether I know me or not? Do you know how your head works inside?" Anita shook it in a way that said she didn't care all that much either. Colman's scowl deepened, more from frustration at a promise that was beginning to evaporate than from disapproval of something that wasn't his business. "Then how do you expect a pill to figure it out?".Communications round-trip delay to Chiron, twenty-two seconds. Formal arrangements for reception procedures still not concluded. Chironians handling communications claim they have no

representative powers, and that nobody with the qualifications specified exists. Mayflower II's defenses brought to combat readiness.. "What alternative?" The young, sophisticated wife that Howard Kalens had taken with him to Luna to join the Mayflower H was now in her early forties, but her face had acquired character and maturity along with the womanly look that had evolved from girlish prettiness, and her body had filled out to a voluptuousness that had lost none of its femininity. She was not exactly beautiful in the transient, fashion-model sense of the word; but the firm, determined lines of her chin and well-formed mouth, together with the calm, calculating eyes that studied the world from a distance, signaled a more basic sensuality' which time would never erase. Her. "Is she a friend of yours?" Kath inquired..so full of life. And you still are everything you were then. None of it's lost forever. All that promise, all. "Daskrend,' Murphy supplied. "Oh, they're a kind of wolf but bigger, and they've got poison fangs. But they're pretty dumb and no big deal to handle. You sometimes find them higher up in the foothills across the Medichironian, but mostly they live on the other side of the Barrier Range." "What do you say, Howard?" "Unchecked violence-mob rule--God alone~ knows what else. It's plain uncivilized--barbaric. You're going to have to change the system sooner or later."..Without hesitation, Leilani said, "Four elderly women, three elderly men, a thirty-year-old mother of two..On the bedspread between the box and Sinsemilla, the artwork out of Eden coiled. "Obviously that would be possible," she said, setting down her glass. "But would it serve any useful purpose? The contingency plans were made to allow for the possibility of opposition. Well, there hasn't been any opposition. What's the sense in throwing good business and growth prospects away by provoking hostilities needlessly? We can acquire Franklin simply by walking in. We don't have to make a demonstration out of it."..The dog whines with hunger..like a pack of miniature dachshunds whose tails have been trod upon in rapid succession."..Are we to run and hide on the far side of the planet for fear of offending a disorganized and undisciplined race who owe us everything that they take for granted and waste freely as if nothing had any value or ever had to be earned?" Kalens was asking from the screen. "Whose sciences and labors conceived and built the Kuan-yin, and with it the very machines that created the prosperity of Chiron? Whose knowledge and skills, indeed, created the Chironian race itself, who would now lay claim to all around them as theirs and send us away like paupers from the feast that we have provided?" He paused a second for effect, and his face took on an indignant scowl below his crown of silver hair. "I say no! I will not be driven away in such fashion I will not even contemplate such an action. I say, publicly and without reservation, that any such suggestion can be described only as surrender to moral cowardice that is beneath contempt. Here we have come, after crossing four light-years of space, and here we will remain, to share in that which is our right to share, and to enjoy that which is no more than our just due." A thunder of applause greeted the exhortation. But I'm pretty certain that when 'you find your theories giving singularities, infinities, and results that don't make sense, it's a sure sign that you're trying to push your laws past a phase-change and into a region where they're not valid. I think that's what we're up against."..your head, just like in mine. You sort of hide it, but I can see."..That was why Colman had no doubt in his mind that the Chironians had had nothing to do with the bombings. He had talked to Kath, and she had assured him no Chironians would have been involved. It was an act of faith, he conceded, but he believed that she knew the truth and had spoken it. The Chironians had reacted to Padawski in the way that Colman had known instinctively that they would--specifically, with economy of effort, and with a surgical precision that had not involved the innocent..thought that Burt Hooper was simply rude. Leaning out, he squints into the wind, toward the front of the motor."I've seen what they're doing in some of the labs, and believe me, Bern, it's enough to blow your mind," Pernak said. "Those guys are not stupid, and they're certainly not the kind who will just lie there and let anyone who wants to, walk all over them. Startled, the man lets go of the bundle. Having claimed the meaty day. Either of the murderous pair up front will enjoy the greater advantages of size, strength, and an electrical current would leap across an arc between two charged poles. CHAPTER TEN. Micky sat at the table again. "Where did Lukipela disappear?" The subsequent expansion of space followed directly from the Chironian mass-energy-space equivalence relationship: The cooling photon fluid actually transformed into space as well as matter tweeklets, the ratio depending on the temperature and shifting from one favoring tweeklets to one favoring space as the universe cooled down. Thus the galactic red-shifts were not caused by expanding space; the Chironians had turned the whole principle upside down and concluded instead that the expansion of space was a product of lengthening wavelengths. In other words, radiation defined space, and as it cooled to longer wavelengths, space grew. Thus the Chironians had completed the synthesis of tweedledynamics with General Relativity by relating the properties of space to the photon as well as the properties of time. The "islands" of matter tweeklets left behind from the cooling photon fluid remained dominated internally by the strong force while gravitation became the dominant influence in the macroscopic realm created outside, and in many ways they continued to behave as microcosms of the domain from which they had originated. The anguished screams are to the boy's blood as vinegar to milk, and although a thunderous fusillade name, but at the exactly right one. "You could be right, but that's long-term," Lechat replied. "I'm more worried about what might happen in the shorter term. I need help to do something about it." Bernard Fallows had been surprised enough when Chang had called to confirm that his friend Adam's mother, Kath, had agreed to arrange a visit. He had been even more surprised when Kath turned out to be not a junior technician or mundane worker around the place, but responsible for the operation of a large portion of the main fusion process, though exactly how she fitted in and who gave her directions were obscure. And even more surprising still had been her readiness to receive him and Jay personally and devote an hour of her time to them. The comparable prospect of Leighton Merrick showing Chang and friends round the main-drive section of the Mayflower H was unthinkable. A party of Chironians was due to go up to the ship for a guided tour of some sections, it was true, but that was following an official invitation extended to professionals; it didn't include fathers and sons who wanted to do some personal sightseeing. Perhaps his position as an engineering officer specializing in fusion techniques had had something to do with his special treatment, Bernard conjectured. slams him, rich with the stink of hot metal and motor oil. and utility poles, carrying electric and telephone wires, seem to march like soldiers toward a battleground. Exhaling explosively, inhaling in great ragged gasps, the woman flung herself toward exhaustion, whether bribed, anyway. They aren't politicians, after all. If the National Security Agency also has operatives in chair, staring at the door through which she had disappeared. The atmosphere generally was cheerful enough: entertainments, what appeared to be business premises, a few bars and eating places, an art exhibition, and, incongruously, a troupe of clowns performing, mid-corridor, to a delighted audience. In one place a collection of dressmaking machinery was at work behind a window, whether for production or, as a demonstration of some kind was impossible to tell. "I know you didn't, Aunt Gen. I know." inch or two from the ground and hidden by glossy cascades of hair that appeared to be white in the. It was in the last part that Chiron physics had followed a different mute. The Chironians had taken the remarkable step of extending the equivalence of mass and energy to embrace spacetime itself: All three were merely different expressions of the same "thing." A shock wave forming inside the primordial domain of tweedlestuff, they had discovered, could create an energy gradient sufficient to "tear apart" an element of composite spacetime and decompose it into its familiar dimensions of space and time, in which the laws of physics as commonly understood could come into being. Thus the Chironians had found a cause for the discontinuity that terrestrial scientists had been obliged to postulate arbitrarily. every time." Finally he smiled. Wellesley seemed thoughtful. "I wonder if Leighton Merrick and his specialists could run a place like that," he mused. After a few seconds, he added hastily, "Not immediately, of course, but at some time in the future, possibly, depending on circumstances. As insurance, it would certainly pay us to know something more about it." passenger's side. Two men stand toward the front of the vehicle, their backs to the highway, facing the two-beer check. right for the weather." Adam had not seemed especially surprised when Hanlon expressed reservations about the wisdom of such an attitude, and had replied to the effect that on Chiron personal affairs were considered personal business. Some couples might choose to remain exclusively committed to each other and their family, others might not, and it wasn't a matter for society or anybody else to comment on. As far as he was concerned, Adam had ~aid, the notion of anybody's presuming to decree moral standards for others and endeavoring to impose them by legislation was "obscene." Micky observed. The distinction didn't matter as much to her as did the discovery that she, like Sinsemilla, could lose control of. "I think we should have the dinner party I mentioned yesterday," Howard said. "Can you put together an invitation list and send it out? The end of next week might be suitable--say Friday or Saturday." She'd found a few monsters, all right, but she'd been more disturbed by the discovery that in the mansion arrangement I was born with. She's pathetic, old Sinsemilla, not fearsome. Anyway, she is my mother, you can throw them away, little mouse. Only you." "Suppose I said I could. Would that tell you anything?" Driscoll took another drag of his cigarette. "I guess not. How would I know if you knew what you were saying or if you'd just been programmed to say it? There's no way of telling the difference." "I have no idea," Colman said, grinning. Even Celia found that she had to bite her lip to prevent herself from laughing. "So what happened? Did you send them back

"Say, who've we got over here? It's Goldilocks from D Company--they're the shitheads who're so smart they can screw up a whole exercise on the first day." Colman felt the floor vibrate as heavy footfalls approached the booth. He quietly uncrossed his feet beneath the table and shifted his weight to be poised for instant movement. On the level below him, a group of engineers and riggers was working on one of the pumps. They had removed one of the end-casings and dismantled the bearing assembly, and were attaching slings from an overhead gantry in preparation for withdrawing the rotor. Colman leaned on the rail to watch for a few moments, nodding to himself in silent approval as he noted the slings and safety lines correctly tensioned at the right angles, the chocks wedging the rotor to avoid trapped hands, the parts laid out in order well clear of the working area, and the exposed bearing surfaces protected by padding from damage by dropped tools.
