We were blinded by our loyalty to the test-pilot philosophy of space flight. We wanted as few scientists as possible and as many astronauts as we could manage. They lived quite nearby, on West 28th, and were interested, primarily, in the television shows they'd seen when they were growing up, about which they were very well-informed. Despite a bad first impression, due to his associating them with Maggie of the green sofa, Barry found himself liking the MacKinnons enormously, and before the next switchover he put his chair in the LOCK position. They spent the rest of the evening together, exchanging nostalgic tidbits over coffee and slices of Partyland's famous pineapple pie. At closing time he asked if they would either consider giving him an endorsement. They said they would have, having thoroughly enjoyed his company, but unfortunately they'd both used up their quota for that year. They seemed genuinely sorry, but he felt it had been a mistake to ask. Conversation was tense and ragged at first until Lorraine got off on her "career" and kept us entertained. softly. No sane attacking force would contemplate taking an objective like that by a direct frontal assault in the center--the lowermost stretch of the trail was too well covered by overlooking slopes, and there would be no way back if the attack bogged down. That was what the enemy commander would have thought anyone would have thought. So what would be the point of tying up lots of men to defend a point that would never be attacked? According to the book, the correct way to attack the bunker would be along the stream from above or by crossing the stream below and coming down from the spur on the far side. So the other side was concentrating at points above both of the obvious assault routes and setting themselves up to ambush whichever attack should materialize. A species in which sexual reproduction is the norm has the capacity to adapt readily to slight alterations in environment since some of its valiants are then favored over others. Indeed, a species can, through sexual reproduction, split with relative ease into two or more species that will take advantage of somewhat different niches in the environment
